

## **2008 PaymentsNation National Settlement System Enhancements**

*PaymentsNation* is excited to announce that it has been working on enhancements to the National Settlement System which will rollout in late 2<sup>nd</sup> quarter of this year. Going forward, *PaymentsNation* will refer to this project as *PaymentsNation NSS V2 (National Settlement System Version 2)*. Some of the features that the members will see in the Version 2 release are:

- Overall performance of the reports module and provide rollup capability
- Redesign of the Contact and Product pages allowing users to utilize lookup tools and better methods of setup capabilities
- Overall performance improvements
- Navigation improvements allowing participants to select exchanges from all screens
- Leverage newer standards for web security mechanisms
- Develop a test system that will emulate production for future testing

In the coming weeks, *PaymentsNation* will begin announcing training sessions that will be conducted via web conferences to allow all users to attend training on the new functionalities of the system. Please begin thinking about who you would want to send to these sessions. These individuals should be those that access NSS today for purposes of utilizing reports, looking up contact and/or product information, maintaining user's access and/or entering settlement data.

*PaymentsNation* will go through a registration process for the training sessions in the next few weeks. Please pass this information along to anyone within your organization that you feel would benefit from attending one of the training sessions.

We will begin sending out updated information every 2 weeks so look for future announcements and should you have any questions regarding this exciting information, please contact either the Dallas Operations Center at 866-593-8629 or the Phoenix Operations Center at 800-279-9059.
